

Oleksandra Boiko

leksa.boiko@gmail.com | [LinkedIn Profile](#) | Lviv, Ukraine

Target Position: Frontend Engineer

Profile Summary

Frontend Engineer with 7+ years of experience developing web applications. Specialized in React, Next.js, and TypeScript. Strong understanding of application architecture, state management, and API integration, with a focus on clean, testable, and maintainable code. Comfortable working across the full development lifecycle and collaborating closely with product, design, and backend teams.

Tools & Technologies

Core: JavaScript (ES6+), HTML5, CSS3, TypeScript, React.js, Next.js, Redux.js/Toolkit, Formik, Yup, Web Components, MFE;

Data Integration: REST APIs, GraphQL, CRUD, Swagger;

Testing: Jest, React Testing Library, Cypress, Playwright, Postman, Percy, Datadog;

Styling & UI: SASS, LESS, SCSS, Styled-components, Material-UI, TailwindCSS, Ant Design, Storybook, Atomic design;

Build Systems: Webpack, Gulp, Parcel, Vite;

AI-Driven Development: Cursor IDE, GitHub Copilot, ChatGPT, Amazon Q;

Accessibility & performance: WCAG, Lighthouse, Screen Reader Testing, Core Web Vitals, Performance Optimization;

Version Control: Git, GitHub, GitLab, familiarity with CI/CD pipelines.

Professional Experience

09/2025 – 04/2026

Frontend Engineer - Highload Solutions

- Designed and implemented microfrontend architecture using Web Components to enable scalable, independently deployable frontend modules.
- Ensured WCAG-compliant accessibility by applying semantic markup, keyboard navigation support, best practices, and inclusive interaction patterns.

- Monitored application performance and reliability using Datadog, proactively identifying and resolving production issues.
- Optimized web performance by improving Core Web Vitals, minimizing layout shifts, and applying advanced rendering and loading strategies to enhance user experience.
- Leveraged AI tools (GitHub Copilot, Cursor, Amazon Q) within IDEs to improve development efficiency and code quality, while continuously building expertise in AI-assisted frontend workflows.

04/2025 – 08/2025

Frontend Engineer - Patrianna

- Designed and evolved custom frontend solutions, including a scalable CMS Builder, reusable npm packages with shared tools and feature modules, and internal services for centralized localization and translation management.
- Managed deployment workflows using Vercel, leveraging preview and production environments to support reliable releases, while monitoring performance and stability with Vercel Analytics.
- Leveraged AI tools (GitHub Copilot, Cursor AI IDE, AmazonQ) within IDEs to improve development efficiency and code quality, while continuously building expertise in AI-assisted frontend workflows.
- Wrote unit tests with Jest and React Testing Library, implemented E2E tests to ensure reliability.

05/2024 – 01/2025

Frontend Engineer - Ciklum | Just Eat Takeaway.com

Contributed to the development of [PIE Design](#), an open-source, customizable UI component library designed for creating responsive and user-friendly interfaces. Explore component implementations in [Storybook](#) or review the source code in the monorepo on [GitHub](#). Later transitioned to the 'Product Experience' team to develop a unified customer-facing frontend for Just Eat Takeaway.com, collaborating on

multiple initiatives to elevate other teams' products to company standards.

- Built reusable Web Components with Lit for the global PIE design system, adopted across product teams, and reduced per-team UI integration effort.
- Monitored application performance and stability using Datadog.
- Documented component APIs in Storybook, accelerating cross-team onboarding. - Implemented unit and e2e testing (Jest, Cypress, Percy), improving release confidence and reducing regression cycles.
- Ensured WCAG compliance across customer-facing products, supporting both usability and regulatory requirements.
- Modernized frontend architecture in collaboration with product and UX teams, aligning 3+ team products with company-wide engineering standards.

08/2019 – 02/2024

Frontend Engineer - Yalantis | ViewTrade Holding Corp.

Worked across multiple FinTech products, including electronic trading systems, digital onboarding, billing management, and client-facing platforms for international financial institutions, brokerages, and wealth management firms.

- Migrated a core microservice from JavaScript to React.js with TypeScript, improving type safety, maintainability, and long-term scalability.
- Built a B2B web application for corporate users to manage trading workflows, billing, onboarding, document printing, and user administration.
- Developed reusable component architecture across B2C and B2B products using React and TypeScript, reducing duplication and accelerating feature delivery.
- Improved frontend performance by identifying and resolving critical rendering bottlenecks in data-intensive trading interfaces.
- Wrote unit tests and technical documentation, maintaining code quality and supporting long-term maintainability.

09/2018 – 08/2019

Frontend Engineer - Civity

Developed and scaled multiple country-specific lead generation websites with localized language support, using a shared architecture to enable fast deployment while adapting design for each market, which improved efficiency and conversion across regions.

- Built and reused UI components across projects, reducing development time and ensuring consistency in functionality and performance.
- Optimized frontend performance to enhance load speed and improve lead capture effectiveness.
- Collaborated closely with designers to deliver technically feasible solutions, resulting in a seamless and user-friendly experience.
- Estimated timelines and independently managed frontend delivery, consistently meeting deadlines.
- Owned end-to-end frontend implementation, ensuring stable releases and reliable functionality across all deployed sites.

04/2017 – 04/2018

Frontend Engineer - Unique Technologies LLC

Developed a trading platform for the agricultural sector, building responsive web applications and custom frontend solutions to enable seamless transactions and improve platform usability.

- Built single-page applications and cross-browser responsive interfaces, ensuring a consistent user experience across devices.
- Implemented custom frontend features using JavaScript and WordPress, enhancing platform functionality and flexibility.
- Resolved production issues and improved system stability, leading to a more reliable user experience.

Education

Master's degree in System Analysis and Management - Dnipro University of Technology (2017–2019)

Bachelor's degree in System Analysis - Oles Honchar Dnipro National University (2013–2017)

Languages

English – Upper-Intermediate (B2),
Ukrainian – Native
