

Oleksandra Boiko

Senior Frontend Engineer

leksa.boiko@gmail.com · [LinkedIn Profile](#) · [Personal Website](#)

7+ years of experience · Lviv, Ukraine · English: Upper Intermediate (B2)

SKILLS

Core	JavaScript (ES6+), TypeScript, React.js, Next.js, Redux/Toolkit, Web Components, Microfrontends
Styling & UI	SCSS/SASS, Styled-components, TailwindCSS, Material-UI, Ant Design, Storybook, Atomic Design
Testing	Jest, React Testing Library, Cypress, Playwright, Percy
Data	REST APIs, GraphQL, Swagger
Performance	Core Web Vitals, WCAG, Lighthouse, Datadog, Screen Reader Testing
Cloud	AWS (S3, Lambda, CloudWatch, Secrets Manager), Datadog
Build & CI	Vite, Webpack, Vercel, Git, GitHub/GitLab, CI/CD pipelines
AI Tools	Cursor IDE, GitHub Copilot, Kiro, Amazon Q

SUMMARY

Frontend Engineer with over 7 years of experience developing production-level web applications in FinTech, e-commerce, and SaaS. Proven success in designing microfrontend architectures, delivering scalable design systems adopted by more than five product teams, and solving key performance issues in data-heavy trading interfaces. Experienced across the entire delivery process, from system design to monitoring in production.

EXPERIENCE

Senior Frontend Engineer · [Highload Solutions](#) Sep 2025 - Apr 2026

- Architected a microfrontend system using Web Components - enabling independently deployable modules, reducing cross-team coupling, and supporting horizontal scaling of the frontend org.
- Drove WCAG compliance across customer-facing surfaces: semantic markup, full keyboard navigation, and screen reader support - reducing accessibility-related issues in QA cycles by ~20%.
- Set up Datadog monitoring for frontend performance and error tracking - enabling proactive detection of production issues before they reach users.
- Improved Core Web Vitals through rendering optimizations and advanced loading strategies - reducing layout shifts and improving LCP scores across key user flows.

Senior Frontend Engineer · [Patrianna\(contract\)](#) Apr 2025 - Aug 2025

- Enhanced and extended a CMS Builder by delivering new features and improvements that empowered non-engineers to manage content layouts independently, eliminating developer dependency for routine content changes.
- Extracted shared logic into reusable npm packages (feature modules, utilities) - used across 10+ brand websites and teams, reducing redundant code and ensuring consistent implementation patterns.
- Centralized localization management into an internal service - simplifying the translation workflow and reducing per-language release overhead.

- Maintained release quality through Vercel preview environments on a Next.js codebase, Jest unit tests, and E2E coverage - enabling confident, stable deployments.

Senior Frontend Engineer • [Ciklum / Just Eat Takeaway.com](#)(contract) May 2024 – Jan 2025

I have been particularly involved in the creation and development of the [PIE Web Component](#) library, an [open-source Web Component System](#) that powers web platforms across Just Eat Takeaway.

In 2025, PIE won the [Best Design System Adoption](#) award at Zeroheight Design System Awards.

- Built reusable Web Components with Lit for the [PIE Design](#) open-source design system - adopted across 5+ product teams, reducing per-team UI integration effort and ensuring visual consistency at scale.
- Modernized the frontend architecture for 3+ product teams - aligning them with company engineering standards and enabling shared infrastructure across previously siloed codebases.
- Documented component APIs in [Storybook](#) - accelerating cross-team onboarding and cutting integration questions from consuming teams.
- Maintained release quality through Jest, Cypress E2E, and Percy visual regression - shortening regression cycles and increasing deployment confidence.
- Ensured WCAG compliance across customer-facing Just Eat products - supporting both usability and regulatory requirements across multiple markets.

Middle Frontend Engineer • [Yalantis / ViewTrade Holding Corp.](#) Aug 2019 - Feb 2024

Core contributor across a suite of FinTech products: electronic trading platforms, digital onboarding, billing management, and client-facing portals for international brokerages and wealth management firms.

- Led migration of a core trading microservice from JavaScript to React + TypeScript - improving type safety, reducing runtime errors, and making the codebase maintainable for a growing team.
- Built a B2B web application for corporate trading workflow management - covering billing, onboarding, document generation, and user administration for enterprise clients.
- Resolved critical rendering bottlenecks in data-intensive trading interfaces - cutting render times by ~35% in views processing high-frequency market data.
- Developed a shared component architecture across B2C and B2B products - reducing UI duplication and accelerating feature delivery across parallel product lines.
- Wrote unit tests and technical documentation - maintaining code quality across a 4.5-year, multi-product engagement.

Junior Frontend Engineer • [Civenty](#) Sep 2018 - Aug 2019

- Built and scaled a network of country-specific lead generation sites with localized language support - shared architecture enabled fast per-market deployment and improved conversion across regions.
- Independently owned end-to-end frontend delivery: estimation, implementation, testing, and release - consistently meeting deadlines across all deployed sites.

Junior Frontend Engineer • [Unique Technologies LLC](#) Apr 2017 - Apr 2018

- Built a trading platform for the agricultural sector - responsive SPAs with custom frontend features, delivering a reliable transaction experience across devices and browsers.

EDUCATION

Master's degree in System Analysis and Management 2017–2019

Dnipro University of Technology

Bachelor's degree in System Analysis 2013–2017

Oles Honchar Dnipro National University
